

1. Initial Assessment of Submissions by the Executive Editor

The manuscript should be within the scope of the journal.
The manuscript should be of excellent scientific quality.
The manuscript should follow the essential minimal formatting and editorial policies.

2. Peer-review Process

All manuscripts are subject to a double-blind peer review and are expected to meet standards of academic excellence. All manuscripts will be considered by the editor and, if not desk-rejected and found suitable for consideration, they are sent to three independent, anonymous expert referees, whose identities will remain anonymous to the authors.

Based on these reviews, the editor and editorial board make a final decision on the submitted manuscript.

3. Final Decision

Accept without any changes: The journal publishes the manuscript in its original form without any changes.

Accept with minor revisions: The manuscript is acceptable for publication if some minor revisions and small corrections can be made to improve it.

Accept after major revisions: The manuscript needs considerable reworking prior to reconsideration. The manuscript is conditionally acceptable for publication if the author addresses the reviewers' suggestions and concerns. The author should resubmit the paper for a second round of assessment.

Rejection: The journal will not publish the manuscript as it contains numerous critical flaws.

This should be noted that resubmitting the revised manuscript does not guarantee final acceptance as the manuscript is assessed again by referees and the editorial board, and also in case of initial (scientific) acceptance, it is mandatory to send an extended English abstract, and the respected authors should pay attention to this important fact that at any stage of publication of the article, if the responsible author has not edited his article according to the schedule of the publication and if they do not deliver, it will be rejected in case of initial acceptance.

For authors:

- Select an appropriate publication outlet. Search facility on its website. Authors enter the article title, a brief abstract and the field of research to get a list of the most appropriate journals for their article.
- Read the aims and scope and author guidelines of your target journal carefully.
- Make a good first impression with your title and abstract.
- The title should summarize the main theme of the article and reflect your contribution to the theory.
- The abstract should be crafted carefully and encompass the aim and scope of the study; the key problem to be addressed and theory; the method used; the data set; key findings; limitations; and implications for theory and practice.
- Prepare the article completely according to the magazine format.
